

# Improve the Mobility of People, Goods and Services

## Result Area Indicators of Success

- Variance in reliable travel time in major corridors
- Number of identified bottlenecks eliminated
- Increase share of ridership of transit and other alternative travel mode
- Percent of infrastructure at or above satisfactory condition
- Percent of population with connectivity to the public Internet.
- Number of new housing units in designated urban centers

## High-Level Purchase Strategies and Selected Indicators of Success

### Improve mobility system quality and service

- **Provide additional connectivity between nodes**
  - Percent reduction of unserved or underserved connection points
  - Increase park and ride capacity
  - Increase transit service connections between modes (e.g. ferry terminals, rail stations, air)
  - Number of bottlenecks eliminated
  - Number of port connection improvement projects funded
  - Number of grade separation or reducing traffic conflicts around and into ports?
  - Percent reduction of intermodal freight barriers
- **Increase non-motorized trips in urban areas**
- **Promote access to telecommunications**
  - Number of internet connections per geographic location per capita
- **Improve mobility for commercial vehicles and freight**
- **Provide additional capacity on deficient corridors**
  - Number of identified bottlenecks eliminated
  - Percent of high priority freight projects fully funded with contributions from state and private sectors
  - Number of passenger-freight rail conflicts eliminated
  - Percent of high-capacity transit network completed
  - Percent of requested/prioritized projects funded
  - Percent of requested/prioritized projects funded

### Preserve and maintain state, regional and local transportation systems

- **Preserve essential components of the system**
  - Lane miles in satisfactory condition
  - Ferry capital assets implemented to meet five, ten, and fifteen year rider ship projections
  - Ferry service maintained at or above 2005-07 levels
  - Passenger rail service maintained at or above 2005-07 levels
  - Freight capacity maintained at or above 2005-07 levels
  - Airport runways maintained at or above industry standard
- **Improve all-weather roads on freight corridors**
  - Percent of deficient lane miles of all-weather roads brought to standard
- **Maintain bandwidth to meet demand**
  - Percent of customers able to access internet at least 80% of the time

## Improve the Mobility of People, Goods and Services

- **Eliminate deficient bridges**

- Percent of bridges in satisfactory condition
- Meet target number of seismic retrofit projects programmed to be completed in the biennium
- Percent reduction of highest risk bridges
- Percent of most heavily traveled bridges seismically retrofit

### Manage system operations and demand effectively

- **Maximize use of the existing system**

- Improve average accident/incident clearance time
- Increase number of travel information webpage visits
- Increase use of commercial vehicle transponders
- Reduce weigh station bypass closure time
- Maintain average peak travel time in major corridors
- Improve winter roadway condition rating
- Reduce number of restricted bridges
- Increase non peak travel usage of all transportation modes

- **Increase travel safety and incident responsiveness**

- Reduce number of incidences per vehicle mile traveled

- **Support local government efforts to increase average vehicle occupancy**

- Percent of Regional Transportation Plans that include estimate of increased average vehicle occupancy (AVO)
- Percent of projects funded that are expected to increase AVO
- Increase average vehicle occupancy in major population centers
- Reduce the rate of growth of vehicle miles traveled compared to population growth
- Increase percentage of region transportation plans that are "current and adequate" per Growth Management Act and Regional Transportation Planning requirements

### Effective system governance and management

### Sustainable financing plan for capital investments
